Complete Part 2 only if the taxpayer's base period percentage for any 6 consecutive months of the tax year equals or exceeds 70%. Figure the base period percentage using the 6 month period in which the taxpayer normally receives the largest part of its taxable income.

The taxpayer's base period percentage for any period of 6 consecutive months is the average of the three percentages figured by dividing the taxable income for the corresponding 6 consecutive month period in each of the 3 preceding tax years by the taxable income for each of their respective tax years.

See the **EXAMPLE** below for information on how to calculate the base period percentage.

**EXAMPLE:** *A calendar year taxpayer receives the largest part of its taxable income during the 6-month period from April through September. To compute its base period percentage for this 6-month period in 2018, the taxpayer figures its taxable income for each April through September period in 2016, 2017, and 2018. It then divides the taxable income for each April through September period by the total taxable income for that particular tax year. The resulting percentages are 65% for April - September 2016, 75% for April - September 2017, and 70% for April - September 2018. Because the average of 65%, 75%, and 70% is 70%, the base period percentage for April through September 2019 is 70%. Therefore, the taxpayer qualifies for the adjusted seasonal installment method.*
